                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          mRNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CDS
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CDS
                                                                                    Genes were identified by a combination of several methods: Gene prediction programs including Fgenesh (http://www.softberry.com/), genscan and Genescan+ (Chris Burge, http://www.softberry.com/), http://CRR-081.mit.edu/GENSCAN.html), GeneMarkHWM (Mark Borodovsky, http://genemark.biology.gatech.edu/GeneMark/), and GeneSplicer (Mihaela Pertea and Steven Salzberg, contact mperteaetigr.cog/, searches of the complete sequence against a peptide database and the plant EST database at TIGR (http://www.tigr.org/tdb/tg1.shtml). Annotated genes are named to indicate the level of evidence for their annotation. Genes without significant peptide similarity to other proteins are named similarity but with EST similarity are named as unknown proteins. Genes without protein or EST similarity, that are predicted by more than two gene prediction programs over most of their length are annotated as hypothetical proteins. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, Simple repeats are hittp://encome.wustl.edu/eddy/tRNAscan-SE)). Simple repeats are hittp://encome.wustl.edu/eddy/tRNAscan-SE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         /grammars.complement(join(5439. .5517,5605. .5684,6132. .6212,

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant: This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable to breatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants mutant plants which are essistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, to allow use of a gibberellin biosynthesis, such as paclobutrazol, dwarf but let crop plants grow tall. The present sequence is derived from the wheat rht gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   100.0%; Score 51; DB 20; 100.0%; Pred. New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype

Disclosure; Fig 2b(9); 88pp; English.

The specification describes polypeptides encoded by the Rht gene (and 1ts homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants

may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence was obtained after partially sequencing wheat Rht clone 14al.

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by the plant. This growth inhibition is antagonised by plaberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin blosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents

Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence was obtained after partially sequencing wheat Rht clone 5al.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Asstivum, inhibit growth of the plant. This growth inhibition is antagonised by gluberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gluberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gluberellin blosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin blosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents the partial cDNA sequence of rice AAD39460 (a wheat Rht gene homologue).
                                                                                                                                                                                                                                                                                                               New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Match 86.7%; Score 44.2; DB 20; Length 725; Local Similarity 93.9%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by globerellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by the conferring a dwarf phenotype on a plant which is correctable by the conferring a dwarf phenotype on a plant which is correctable used to produce Rht mutant plants which are dwarfed compared with uld-type, the dwarfing being globerellin-insensitive. Taller plants wild-type, the dwarfing being globerellin-insensitive. Taller plants the plant of interest. Plants may be made which are resistant to compounds which inhibit globerellin blosynthesis, such as paclobutrazol, e.g. to allow use of a globerellin blosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents rice expressed sequence tag (EST) AAD39460, which is homologous to the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ő

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Trilicum Aestivum, inhibit growth inhibition is antagonised by growth of the plant. This growth inhibition is antagonised by gibberellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with gibberellin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberellin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberellin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberellin biosynthesis, such as paclobutrazol, dwarf but let crop plants grow tall. The present sequence was cobtained after partially sequencing wheat Rht clone 14al.

New Triticum Aestivum polynucleotides - encode a polypeptide which provides inhibition of the growth of plants, which inhibition is antagonised by gibberellin, used to confer a dwarf phenotype

Disclosure; Fig 11a; 88pp; English.

The specification describes polypeptides encoded by the Rht gene (and

its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by globerallin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by treatment with globerallin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being gibberallin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit gibberallin biosynthesis, such as paclobutrazol, e.g. to allow use of a gibberallin biosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence represents the partial sequence of the maize D8-1 allele.

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by globerallin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by the treatment with globerallin. In addition, the products can be used to produce Rht mutant plants which are dwarfed compared with uld-type, the dwarfing being globerallin-insensitive. Taller plants may be made by knocking out Rht or the relevant homologous gene in the plant of interest. Plants may be made which are resistant to compounds which inhibit globerallin blosynthesis, such as paclobutrazol, e.g. to allow use of a globerallin blosynthesis, such as paclobutrazol, dwarf but let crop plants grow tall. The present sequence represents the partial sequence of the wheat rht-10 allele. Gaps ö Length 416; Indels Sequence 416 BP; 59 A; 168 C; 129 G; 60 T; 0 other; 76.5%; Score 39; DB 20; 1 100.0%; Pred. A library of S. clavuligerus NRRL 5741 genomic DNA fragments (15-22 kb) constructed in cosmid pLAFR3 was screened for the cla gene using a probe based on a partial N-terminal sequence from the CLA enzyme. Isolated clone K6L1 included a 15kb fragment having the sequence given in AAQ91580 that included the cla gene (ORF4).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence encodes an beta-lactam synthetase polypeptide. The enzyme is encoded by orf3 of the clavulanic acid biosynthesis cluster. This enzyme converts a beta-anino acid (formed from arginine and pyruvate) into the beta-lactam form, early in the clavulanic acid biosynthesis pathway. The beta-lactam synthetase enzyme is used for 2-aminopropanoic acid derivatives. The method is particularly used to make (25)-5-quanidino-2-(2-oxo-azetidin-1-yl)pentanoic acid from N2-(2-carboxyethyl)-(5)-arginine. (25)-5-quanidino-2-(2-oxo-azetidin-1-yl)pentanoic acid is an intermediate for clavulanic acid, a known inhibitor of beta-lactamase, used in combination with beta-lactam antibiotics for treatment of infections. More generally, N-substituted azetidinones are intermediates for other clavulams and

The specification describes polypeptides encoded by the Rht gene (and its homologues) that, when expressed in Triticum Aestivum, inhibit growth of the plant. This growth inhibition is antagonised by globerellin. The products can be used to provide Rht expression in plants, conferring a dwarf phenotype on a plant which is correctable by the conferring a dwarf phenotype on a plant which is correctable used to produce Rht mutant plants which are dwarfed compared with wild-type, the dwarfing being globerellin-insensitive. Taller plants wild-type, the dwarfing being globerellin-insensitive. Taller plants the plant of interest. Plants may be made which are resistant to compounds which inhibit globerellin blosynthesis, such as paclobutrazol, e.g. to allow use of a globerellin blosynthesis, such as paclobutrazol, e.g. to allow use of a globerellin blosynthesis inhibitor to keep weeds dwarf but let crop plants grow tall. The present sequence was obtained after partially sequencing wheat Rht clone 14al.

/note="Vector: pBk-CNM's Site_1: EcoRI; Site_2: XhoI; This
seed coats in mid per seed. Traces of pod and
embryo tissue also present. Complementary DNA was
synthesized from mRNA using an XhoI-poly(dT)
linker-primer. EcoRI adopters were ligated to the
blunt-ended cDNA fragments and the products were digested
with XhoI for directional cloning into lambda ZAP Express
vector: This lambda library was amplified once using E.
coli host strain XII Blue MRF'. Inserts were then
subcloned by mass excision using ExAssist helper phage for
conversion into phagemid vector pBK-CMV in E. coli host
strain XLOLR."

```

```
XhoI; Plants were grown in an aeroponic chamber for 14 days on nitrogen-rich medium followed by 3 days on N-free medium. RNA was extracted from root tips (1-3 cm). cDNA was prepared from polyA+ enriched RNA. The cDNA was directionally ligated into Uni-zapXR vector from Stratagene and packaged using Giapack Gold packaging extracts. Plasmids containing cDNA inserts were mass-excised from phage stocks using ExAssit helper phage and propagated in SOLR cells. Clone ordering and sequencing was performed by the Centre National de Sequencage (Genoscope, EVTY, France)."

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 1, A Sequence 2, A Sequence 1, A Sequence 2, A Sequence 4, A Sequence 4, A Sequence 1, A Se
